TELEDYNE PARADISE DATACOM
Everywhereyoulook™

Overview

The **QFlex-400™ Encryption P2MP** modem is pre-configured to provide only the features required for use as a remote modem in a **Q-NET™** point-to-multipoint IP system utilising a **QMultiFlex-400™** hub. This makes it easy to purchase exactly what you need.

The modem is fitted with the standard **QFlex-400** modem software and so can also operate point-to-point. Additional features for point-to-point operation, as per the **QFlex-400** datasheet, can be purchased if required.

The **QFlex-400E P2MP** modem supports the most powerful bandwidth-saving technology available.

There is a choice of DVB-S2X or FastLink™ low-latency LDPC for both the outbound and inbound carriers. DVB-S2X, is 20% to 60% more bandwidth efficient than its predecessor, DVB-S2.

Bandwidth-saving IP features include variable coding and modulation (VCM), adaptive coding and modulation (ACM) and TCP acceleration. Data for the remote modem can be filtered from the shared outbound using Virtual LAN ID, stream ID, IP address, DSCP, etc.

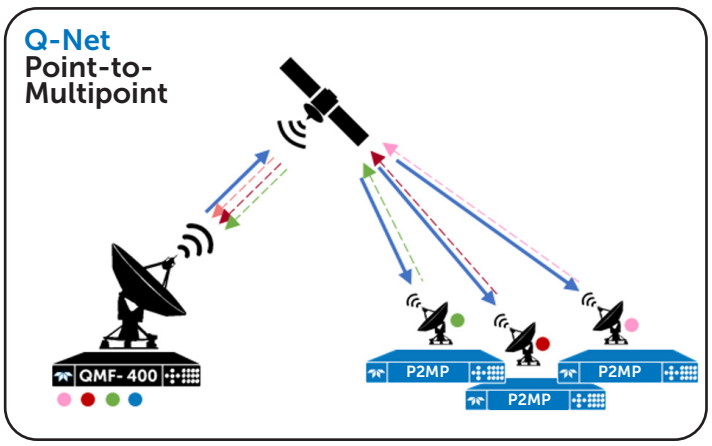
Point-to-Multipoint Network Configuration

Point-to-multipoint networks allow a central hub (a **QMultiFlex-400** Modulator/Multi-Demodulator) to broadcast to many remote nodes. The **QFlex-400 P2MP** modem at each remote node receives the full bandwidth carrier, then the SCPC protocol and security allows only the traffic destined for that particular node to pass through. The **Q-NET** software architecture performs the configuration and network management functions.



Advantages

- The **QFlex-400 P2MP** Modem is pre-configured to ensure the right feature set to work with the **QMultiFlex-400** modem/hub
- Receives the point-to-multipoint outbound carrier and transmits SCPC back to the hub.
- Speed upgradable in the field
- Unified platform allows flexible redeployment
- The security of SCPC, with no contention or overbooking, and guaranteed CIR and BIR

Q-Net Star Network: For a point-to-multipoint star network, the remote site transmits back to the hub, and the hub modem (**QMultiFlex-400**) is equipped with a separate demodulator for each site, up to a maximum of 16. However, a star system may be extended to support up to 128 sites with further **QMultiFlex-400** demod only units connected at the hub. Each remote site communicates back to the hub or through the hub to other nodes. Remote sites can be populated with lower cost **QFlex-400 P2MP** modems.

Product Features

Advanced Bandwidth-Efficient Features

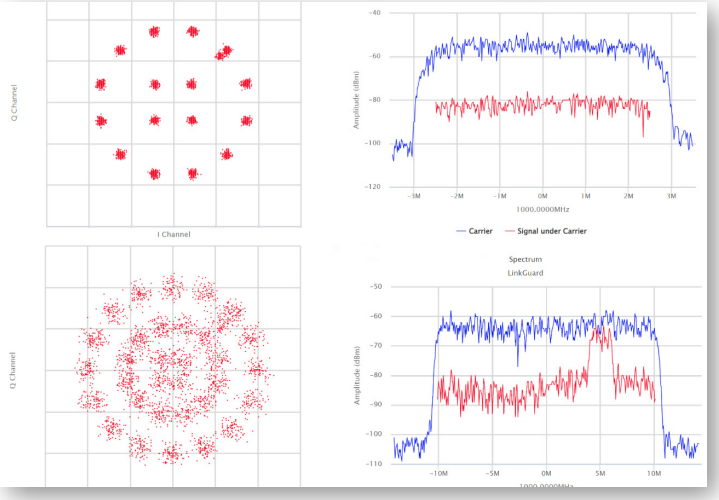
The **QFlex-400™ P2MP** modem supports the most powerful bandwidth-saving technology available.

DVB-S2X, is between 20% and 60% more bandwidth efficient than its predecessor, DVB-S2.

XStream IP™ bandwidth-saving IP features include ACM, acceleration and header and payload compression.

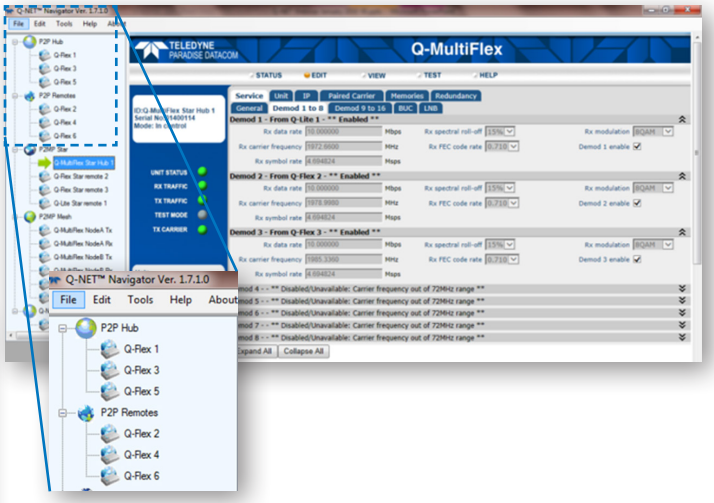
LinkGuard™ Interference Detection

Built-in Spectrum Analyser showing LinkGuard™ Signal-Under-Carrier interference detection without/with interferer present.



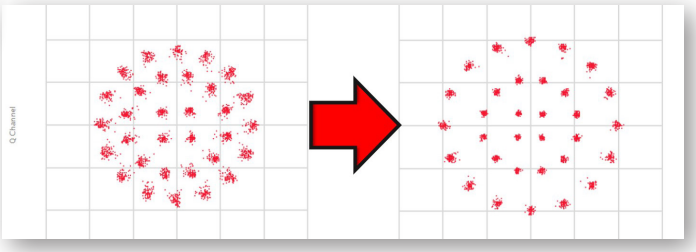
Included Network Management

Q-NET Navigator supports monitor and control of all Paradise modems from a single application. Includes easy-to-use navigation, support for multiple operator roles / access levels, continuous status / alarm polling and full access to all modem features. The web based Q-NET Navigator is included as standard, free of charge.

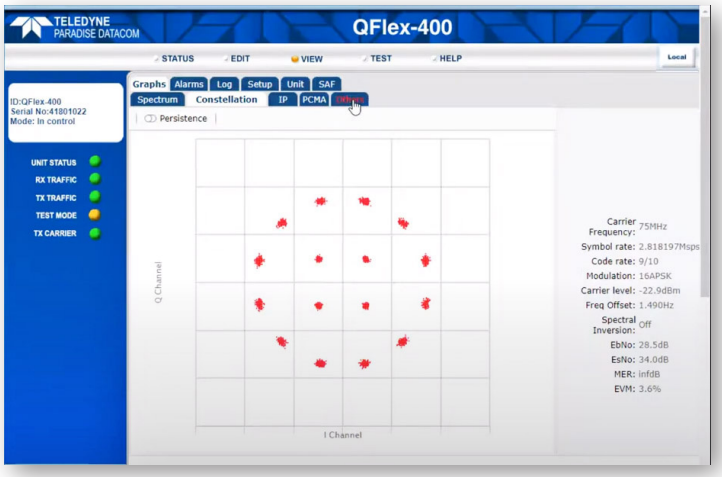


ClearLinQ™

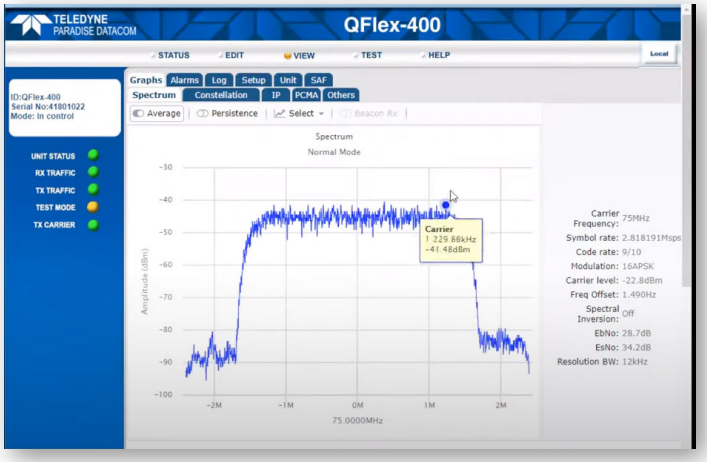
'Before and after' constellations showing ClearLinQ™ Adaptive Tx Pre-distorter compensating for severe non-linear signal distortion to a 32APSK carrier.



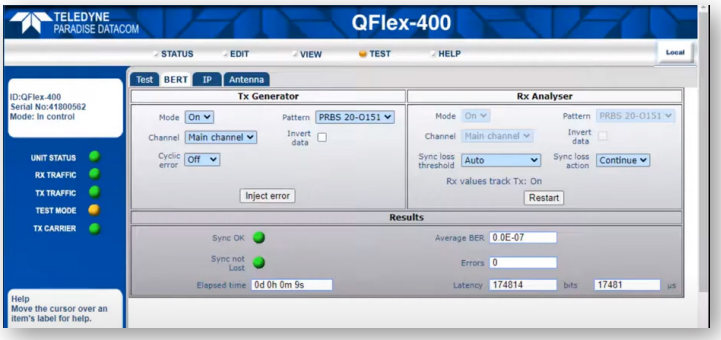
Powerful Onboard Test Equipment



Constellation view: The Rx Constellation Monitor can be used to check for correct modem operation including checking for signal distortion and phase noise. The persistence mode is useful for showing any long-term effects due to phase noise and interference.



Spectral view: The Rx Spectrum Monitor is a powerful real-time spectrum analyser within the modem that is used to view the received signal spectrum. The monitor can not only display the wanted carrier but a Super Wide view allows checking for adjacent interfering carriers.



Inbuilt Bit Error Rate Test Set (BERT): The internal PRBS BER Tester allows pseudo-random bit patterns to be injected into the main traffic or overhead channel and the BER results to be monitored. Use of the ESC and AUX channels allows continuous real time traffic performance monitoring whilst the modem carries traffic. As well as average BER, number of bit errors and sync status, latency can also be measured.

The Q-Net Family

Q-Net is a fabric that allows each of the Q-Series modems to seamlessly interoperate giving you the ability to upgrade your network and re-use assets at will.

The different models have been thoughtfully designed to cover a wide variety of network situations flexibly and securely.

From models with WGS certification and encryption, to built-in features like 1:1 redundancy and test tools, we give you the lowest risk, highest return secure network available.
